Digital Signal Processing for Modern Technology

Message from the Guest Editors

The early fields of digital signal processing mainly include audio signal processing, audio compression, digital image processing, video compression, speech processing, speech recognition, and digital communication. With the rapid development of sensors and information and communication technology today, digital signal processing has played a key role in new fields such as the Internet of Things, medical industry, robotics, unmanned aerial vehicles, and Industry 4.0. This Special Issue aims to cover a wide range of topics, including digital signal processing and its applications related to sensing in the Internet of Things, information and communication technology, robotics, unmanned aerial vehicle, medicine and nursing, industrial manufacturing, etc. Paper submissions are now welcome.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.
