

## Special Issue

# Dynamics and Control System Design for Robot Manipulation

### Message from the Guest Editor

Robotic systems are driving technological innovation and transforming manufacturing and service industries. The key to advancing these systems lies in the exquisite design of dynamics and control mechanisms that enable robots to perform tasks with precision, adaptability, and efficiency. As the cornerstone of robotics, designing dynamics and control systems involves integrating various sensors and actuators to ensure accurate and reliable robot operations and provide essential feedback for navigation, manipulation, and interaction tasks. These sensors allow robots to perceive their environment, adapt to real-time changes, and execute complex actions autonomously. This Special Issue aims to explore cutting-edge research and developments that drive the creation of highly capable and intelligent robotic systems.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
