Electrochemical Aptamer-Based Biosensors

Message from the Guest Editors

Electrochemical biosensors are powerful analytical tools generally providing multiplex analysis, fast response, sensitivity, and specificity at low cost. Aptamers are short single-stranded DNA or RNA oligonucleotides that are isolated, in vitro, from a synthetic oligonucleotide library using the automated technique SELEX. Aptamers are able to bind their target with high affinity (ranging from nano- to picomolar level) and specificity. The analytes cover a wide range, from small molecules and proteins to complex structures like whole cells and viruses. Aptamers are characterized by numerous relevant properties suitable for electroanalytical applications, as follows: (1) highly efficient and reproducible chemical synthesis, (2) high-affinity binding capacity, (3) thermal and conformational stability, (4) easily controlled chemical modification, (5) a highly flexible structure, and (6) low cross-reactivity. Electrochemical aptasensors can be applied in several areas such as health (clinical diagnostic and therapeutic purposes), the food industry, and environmental monitoring.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
