Rehabilitation Robots: Design, Development, and Control

Message from the Guest Editors

Age-related problems, including cardiovascular diseases such as stroke, are among the most common causes of disability worldwide. Stroke causes musculoskeletal disorders, including motor deficits in the upper and lower limbs. Rehabilitation therapies are considered the most effective treatment for promoting functional recovery. Rehabilitation robots constitute a novel technology that provides physiotherapy and motion aid to accelerate neuronal plasticity, measure patients' healing processes, and quantify sensory-motor action. Research on rehab robotics has considerably advanced throughout the last decade. Due to the complexity of the mechanical design (anthropomorphic design), the variety of assistance strategies (for different types of patients with varying degrees of impairments), and the sensitivity of their interaction with various human conditions, these robots remain an active area of study. For detailed information, please visit [here](#).

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
