Field Effect Transistor (FET)-Based Biosensors

Message from the Guest Editor

The Special Issue aims to gather valuable studies regarding recent advances in FET-based biosensors. Topics include but are not limited to new structures and materials, detection principles, methods for enhancing sensitivity and selectivity, and novel applications. Both original research papers and review articles describing the current state-of-the-art in FET-based biosensors are welcome.

- Field-effect transistors
- Biosensors
- Bio-nano interface
- Biomarkers
- Surface functionalization
- Lab-on-chip
- Diagnostics
- Point-of-care
- Clinical applications

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.
