Vehicle-to-Everything (V2X) Communication Networks 2024–2025

Message from the Guest Editors

Vehicle-to-everything (V2X) communication networks are pivotal in advancing modern transportation systems, where vehicles can communicate with each other (V2V), infrastructure (V2I), pedestrians (V2P), and networks (V2N). This technology has the potential to improve road safety and traffic efficiency. However, various challenges still exist in implementing effective V2X networks, including, but not limited to, fault-resistant communication networks for reliable information distribution, minimizing delays and data loss, and ensuring user security and privacy in diverse V2X environments. We are pleased to invite researchers and professionals to submit original papers to this Special Issue, and look forward to your contributions. For detailed information, please visit [here](#).

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
