

## Special Issue

# Intelligent Acoustic Sensors and Its Applications

### Message from the Guest Editor

Dear colleagues, Acoustic sensors are built to measure an environment and convert this information into a digital or analog data signal that can be interpreted by a computer or observer. Much like a highly sensitive ear, acoustic sensors interpret the material's voice into feasible waveforms. Additionally, acoustic sensors are a vital link in determining how to apply algorithms to achieve their purpose. Incorrect or improper installations of acoustic sensors result in the failure to meet projects or specific needs. The scope of this Special Issue extends to all types of acoustic sensors with intelligent algorithms designed for productive applications.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
