Editorial Board Members' Collection Series: Remote Sensing for the Atmosphere and Climate

Message from the Guest Editors

Remote sensing technologies have provided major advances to our understanding of the atmosphere and climate systems, as well as their changes. The aim of this Special Issue is to collect new research and developments in the field. We welcome original contributions in order to present current research trends in this collection. Topics of interest include the following:

- remote sensing of the atmosphere;
- remote sensing of oceans, land, snow, and ice;
- environmental change;
- land cover/land use;
- earth observation.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.
