

## Special Issue

# Lidar/Laser Scanning in Civil Engineering

### Message from the Guest Editors

Light detection and ranging (LiDAR), also called laser scanning, is a high-accurate, remote-sensing technology for efficient 3D data capture in the form of point clouds. Continuous technological developments and reductions in data acquisition cost have triggered the interest in this technology over the years. Originally applied in airborne prototypes for atmospheric research and topographic mapping applications, laser scanning has since been adopted for many other uses, with promising potential to assist in mapping, monitoring and assessment of built-up infrastructure.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro  
Department of Electrical and Information Engineering, Politecnico di Bari, Via Orabona 4, 70126 Bari, Italy

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
