Special Issue

Multi-Sensor Systems for Food and Agricultural Applications

Message from the Guest Editors

The growing interest in high-quality and sustainable production in agriculture and the food industry has promoted the development of more automated and accurate analytical systems. Additionally, optimized process control is essential to address safety rules and maintain the commercial viability of an end product. This involves, among other things, a rapid assessment of the (bio) chemical and physical properties of raw materials, process flows and end products. In this context, the use of multi-sensor analysis systems combined with new chemometric tools or machine learning techniques can provide great advantages. These systems can offer global information on the system, recognizing quantitative and qualitative composition, and provide a warning in the case of deviations or events, for example, in line production systems. This Special Issue will provide a unique opportunity for researchers to publish their original achievements related to the design. characterization and validation of multi-sensor systems for food and agricultural applications.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological

developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
