Perception, Planning and Control of Marine Robots

Message from the Guest Editors

Marine robots, such as surface vessels, underwater vessels, have been widely used for ocean monitoring, survey, search and rescue tasks. Perception, planning and control play an important role when performing such tasks. This special issue will focus on the use of sensors to address marine robotic challenges in the complex ocean environment, dealing with both the scientific foundations of sensors and their use and applications on marine robots. About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.
