

Special Issue

Remote Sensing of Plants, Soil, and Atmosphere for Agricultural Monitoring: 2nd Edition

Message from the Guest Editors

This Special Issue welcomes research papers on the contribution of newer satellite sensors, e.g., Sentinel and TROPOMI, to plant biotic and abiotic stress detection, crop growth and yield predictions, and agricultural nutrient tracking. Additionally, we welcome papers that present innovative uses of these satellites to enhance management practices.

Potential topics include (but are not limited to) the following:

- precision agriculture
- remote sensing
- satellite monitoring
- climate monitoring
- digital soil mapping
- smart farming
- agricultural management

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.
