

## Special Issue

# Advances in Energy Harvesting and Sensor Systems

### Message from the Guest Editors

Undoubtedly, research on environmental energy conversions and harvesting has recently been a topic of significant interest; multiple energy harvesting devices have been exploited as well, including solar cells, thermoelectric generators, electromagnetic generators (EMGs), piezoelectric nanogenerators (PENGs), triboelectric nanogenerators (TENGs), and so on. For this Special Issue, we welcome high-quality submissions that describe original and unpublished research contributions advancing the frontiers of energy harvesting devices and self-powered sensor systems, with particular emphasis on efficient energy harvesting and high-performance self-powered sensing systems.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
