

## Special Issue

# Novel Scheduling and Optimization Methods to Wireless Sensor Networks

### Message from the Guest Editors

Wireless sensor networks are one of the first real-world examples of pervasive computing—small, smart, and cheap sensing and computing systems that can monitor and control with unsurpassed efficiency and accuracy. They have supported a variety of military services, industry, smart house, intelligent transportation, healthcare, etc. To provide a higher quality of experience (QoE) in various fields, the development of wireless sensor networks presents the following trends: 1) the network scale expands rapidly, and one network may contain tremendous heterogeneous sensors, each of which has different service capabilities and requirements; 2) the mobility of sensors results in a complex time-variant network structure; 3) the network environment and system requirements change with the space and time domains; 4) the network flexibility and efficiency will be greatly improved using software-based network management. To handle these challenging characteristics imposed by wireless sensor networks, more research efforts should be conducted focusing on novel scheduling and optimization methods to ensure high-rate, low-latency, low-cost, and reliable services.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Chemistry, Analytical) / CiteScore - Q1 (Instrumentation)
