Special Issue

Advanced Interference Mitigation Techniques for GNSS Signal Processing and Navigation

Message from the Guest Editors

The main topics of interest of this Special Issue include but are not limited to:

- Analysis of the impact of GNSS interference on land, airborne, and marine navigation applications;
- Advanced signal processing and spectral estimation methods for GNSS interference detection and mitigation;
- Case studies and new results on GNSS interference detection and mitigation methods;
- Analysis of the impact of GNSS jamming and spoofing on the operation of autonomous platforms;
- Enhancing the safety and reliability of autonomous systems in the presence of interference;
- Multi-sensor fusion with other sensors and systems (e.g., INS, radars, cameras, LiDAR) for mitigating the impact of GNSS interference.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro
Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
