Recent Theories and Applications in Transportation and Mobility

Message from the Guest Editors

This Special Issue solicits innovative contributions from academia and industry on recent theories and applications in transportation and mobility. More specifically, we invite researchers, experts, practitioners, and students to submit their original works concerning the use of emergent technologies (such as V2X, machine learning, IoT, drones/UAVs, and blockchain) to enable humans, vehicles, goods, transportation infrastructures, communication networks, as well as data storage and processing facilities to individually and collectively provide citizens, clients, businesses, and governments with the right transportation and mobility services at the right time.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.
