

Special Issue

Wearable Sensors and Mobile Apps in Human Health Monitoring

Message from the Guest Editor

Wearable sensors and mobile apps allow for non-invasive and continuous measurement of health biomarkers, enabling users and researchers to better understand human physiology at a much larger scale than normally possible in laboratory studies. In this Special Issue, you are invited to submit contributions describing the development and validation of technologies and methods to monitor human health using wearable sensors and smartphone apps. Contributions ranging from technology development and validation, and algorithm development and validation to large-scale analysis of user-generated data in the context of measuring and analyzing different aspects of human health such as cardiovascular health, metabolic health, sleep, physical activity, stress, chronic disease, etc. are encouraged.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro
Department of Electrical and Information Engineering, Politecnico di Bari, Via Orabona 4, 70126 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
