Sensors for Smart Cities

Message from the Guest Editors

Different types of sensors are widely used in smart cities in different fields: intelligent public lighting, smart grids/microgrids and nanogrids, renewable energies, electric vehicles, autonomous navigation systems, health monitoring systems, materials, brain-machine interfaces, imaging technologies, etc. These sensors are divided into three categories: 1) classical sensors; 2) quantum sensors; 3) smart sensors. These sensors can be wired or wireless.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.
