Vision- and Sensor-Based Sensing in Human Activity Recognition—Second Edition

Message from the Guest Editors

Following the success of the previous Special Issue "Vision- and Sensor-Based Sensing in Human Activity Recognition"

(https://www.mdpi.com/journal/sensors/special_issues/Human_Activity), we are pleased to announce the next in the series, entitled "Vision- and Sensor-Based Sensing in Human Activity Recognition—Second Edition". The goal of this Special Issue is to help to overcome the gap between human activity recognition and its involvement in the development of many important applications, including human–computer interaction (HCI), virtual reality, security, the internet of things (IoT), and healthcare facilities.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief
