

## Special Issue

# Vehicle-to-Everything (V2X) Communication for Intelligent Transportation

### Message from the Guest Editors

This Special Issue of the *Sensors* aims to discuss a novel design of V2X architecture, technique, networks, services, and applications for ITS and search for innovative solutions for meeting the expectation of V2X communication and ITS. Topics of interest include (but are not limited to):

- New wireless communications and networking architecture for V2X and ITS;
- Novel theory, technology, methodology, tools, and applications for V2X and ITS;
- Modelling, simulation, and field evaluation for V2X and ITS;
- Big data and data analytics for V2X and ITS;
- Machine learning techniques for V2X and ITS;
- Edge architecture, service, and applications for V2X and ITS;
- New paradigms and management for smart mobility;
- Vehicular networking, vehicular cloud, and Internet of Vehicles (IoV).

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.
