Advances in Smart Nanomaterials and Quantum Sensors: Integrating AI/ML for Next-Generation Applications

Message from the Guest Editors

Smart nanomaterials and quantum sensors are transforming the landscape of sensing technologies by offering unprecedented sensitivity, selectivity, and efficiency. These innovations are particularly impactful in fields such as healthcare, environmental monitoring, and energy management. Smart nanomaterials, characterized by their high surface area and tunable chemical reactivity, serve as the foundation for next-generation sensors. Quantum sensors, based on principles like superposition and entanglement, enable the detection of minute changes in physical, chemical, or biological parameters. The integration of lab-on-chip systems with quantum sensing technology promises compact, efficient solutions for rapid and precise analysis, essential for medical diagnostics and environmental monitoring. Incorporating artificial intelligence and machine learning further amplifies these systems' potential through real-time data processing and autonomous decision-making. These advancements are paving the way for a new era of intelligent, high-performance sensing technologies with wide-ranging applications.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro
Department of Electrical and Information Engineering, Politecnico di Bari, Via Orabona 4, 70126 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
