Waveguide Transitions for Millimeter-Wave Antenna Arrays Communications

Message from the Guest Editors

Communications networks are exponentially increasing the volumes of data traffic. Millimeter-wave (mmWave), THz wireless local area, and cellular networks can support very high download speeds. They have become one of the most interesting techniques to be applied in different areas such as positioning systems, communication between devices, and sensing or imaging transmission, among others. The coverage of mmWave networks has been expanded due to the application of large-scale mmWave antenna arrays. Thanks to the short wavelengths, large antenna arrays can be packed into small dimension supports. We can join more antenna elements in mmWave frequencies than in microwaves facilitating the use of multiple-input multiple-output (MIMO) systems. Antenna arrays can be designed to provide a high-gain link from antennas to end devices. This Special Issue will reflect current research trends and novel approaches related to the issues of Waveguide Transitions designs and propagation for 5G millimeter-wave applications for mmWave antenna arrays.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Analytical) / CiteScore - Q1 (Instrumentation)
