

## Special Issue

# Wearable Antennas and Sensors for Microwave Applications

### Message from the Guest Editor

The Special Issue is mainly focused on new design methodologies and simulation techniques of wearable devices to face the problems imposed by the human body proximity, and on new materials, fabrication, and miniaturization methods for single and multi-band applications. Authors are invited to submit articles reporting recent advances in wearable antennas and sensors for microwave applications. The scope of this Special Issue will be the collection of new full research and/or review results, and highly rated manuscripts exploring the above topics. We encourage submissions on areas related to:

- Textile antennas;
- Flexible microstrip and printed antennas;
- Epidermal antennas;
- 3D printed antennas;
- Origami wearable antennas;
- Wearable antennas fabrication technology;
- Wearable antennas testing and measurements.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
