Special Issue

Wearable Sensors for **Neurological Diseases Remote Monitoring**

Message from the Guest Editors

Many emerging technological devices have the potential to improve data capture sensitivity, accuracy, reproducibility, and feasibility, thus surpassing some of the limitations of traditional clinical tests. So far, wearable devices have mostly been tested and used in laboratory settings. With the expected significant increase in the number of neurological patients in the coming decades, remote monitoring, with its ability to provide a more holistic and continuous view of a patient's condition in a given environment, will become a crucial tool for providing and optimizing patient care. Therefore, it is critical that researchers focus on developing devices, algorithms, and assessment protocols that can help us achieve this goal. For detailed information, please visit here.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
