

Special Issue

Digital Twins and Robot Sensing for Smart Construction and Facilities Management

Message from the Guest Editors

The COVID-19 pandemic has severely disrupted global economic activities, and has very rapidly changed the way we designed, operated, and maintained the built environment. As previous relevant research on building design has much focused on structure, function and appearance, planners in trying to anticipate the new environmental inventions as related to the building performance faces exceptional difficulties. There is huge unmet needs to transform conventional operating arrays of old buildings towards autonomous built environment for improving its sustainability, resiliency, and well-being. Nowadays, innovative digital technologies such as Digital Twin, Robotics, Artificial Intelligence, and 5G have bring new opportunities for research, and seek to transform the way people design and manage the built environment. This Special Issue aims to collect state-of-the-art research on the latest development of innovative digital solutions for autonomous built environment management. Critical reviews and original research papers which address current research gaps, theoretical frameworks, methodologies, and case studies are welcome.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Department of Electrical and Information Engineering, Politecnico di Bari, Via Orabona 4, 70126 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
