Sensing and Signal Processing Technologies for Outpatient Monitoring and Rehabilitation

Message from the Guest Editors

The ageing society and the growing prevalence of population diseases will stretch hospital capacity to the limits, and the increased use of outpatient solutions seems inevitable. Outpatient solutions have several medical benefits, such as faster rehabilitation and improved quality-of-life for patients, but they also pose technical challenges in terms of disease monitoring and rehabilitation progression as well as the identification of situations that require medical intervention. Most of the conceivable technologies rely on sensors and signal processing to some extent, and the associated science is the focus of this Special Issue. Topics include, but are not limited to:

- Sensing technologies for disease and rehabilitation monitoring;
- Wearable and ubiquitous sensing technologies;
- Model-based technologies for the estimation of disease and rehabilitation progress from sensor signals;
- Infrastructure solutions for the management of outpatient populations;
- Sensing technologies for rehabilitation and independence-improving technology such as cobots and exoskeletons.

For more details, please visit [here](#).

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Department of Electrical and Information Engineering, Politecnico di Bari, Via Orabona 4, 70126 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
