

Special Issue

Application of Satellite Communication in Network Sensing

Message from the Guest Editors

Satellite Communications are constantly evolving and have become increasingly widespread in the last decade. New and emerging scenarios and use cases are integrating satellite networks for different purposes. Network Sensing is one of these purposes. Satellite Communication networks can be exploited to monitor the conditions of underlying networks and systems. Satellite networks, particularly the LEO mega-constellation with Inter-Satellite links, are suitable, due to their high coverage area and high availability. They are able to collect and forward large amounts of data from the monitored-system nodes (sensors, devices, etc.) to entities, aiming to store and manage these data. This Special Issue of *Sensors* is dedicated to further improving the research on this field with innovative solutions from the communication protocols, network architecture, and data analysis and processing technique viewpoints.

- Satellite communication networks
- Network sensing
- Data collection through satellite networks
- Data communication solutions throughout satellite networks
- Data management and forward through satellite networks
- Data processing within satellite networks

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
