

## Special Issue

# Wearable Assistive Devices for Disabled and Older People

### Message from the Guest Editor

Disabled and older people use assistive devices to overcome barriers to carry out activities, enabling them to do more and do so more safely, easily, and enjoyably and participate more effectively in society. Wearable devices are becoming increasingly popular and include smartwatches, headbands, rings, glasses and clothing, wireless headbands, and head-mounted displays. The popularity of wearable devices gives the potential for designing wearable assistive devices that are non-stigmatizing and more likely to be used (worn). They may be less likely to be mislaid or difficult to find, an important advantage for many older and disabled people. However, wearable devices with small components may raise accessibility and usability issues. This Special Issue covers the full range of different types of assistive devices. All papers should have a significant original contribution.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
