Special Issue

Emotion Recognition in Human-Machine Interaction

Message from the Guest Editors

In recent years, human-machine interaction (HMI) research has been gaining momentum in numerous application domains such as healthcare, entertainment, and public services. In many HMI applications, it is essential for the machine, such as a computer or a robot, to measure, understand, simulate, and react to human emotions. Thus, emotion recognition has become one of the most important aspects of HMI. Currently, emotion recognition technology has broadly spanned from remote sensing (e.g., computer vision) to wearable devices (e.g., physiological sensors). Hybrid methods that integrate the advantages of different sensing and recognition mechanisms have also demonstrated their strength and flexibility, especially in application-driven designs demanded by different user groups characterized by demographic features, health conditions, application environments, and other factors that impact user preferences. We invite original research papers and review articles on HMI-related emotion recognition innovations, including but not limited to algorithms, sensors, application-oriented system integration and tuning, as well as feasibility and usability studies.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological

developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
