

# Special Issue

## Sensors in Forensic Science

### Message from the Guest Editor

Forensically related evidence such as illicit drugs, chemical warfare agents, biological fluids, DNA, gunshot residue, latent fingerprints, among others, are often analyzed using presumptive or confirmatory methods in a lab setting. There is a need for an in-field or on-site testing outside of the lab, which may be achieved through the design and development of sensors. This Special Issue aims to address sensors for the detection and analysis of targets related to forensic science.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
