Internet-of-Wearables Electrochemical Systems

Message from the Guest Editors

This Special Issue aims to collect both review and original research articles related to electrochemical devices specifically designed to be compatible with IoT applications. The emphasis is on wearable systems that exploit electrochemical principles for sensing purposes and/or to obtain energy from naturally available sources (electrochemical energy harvesters). Electronic interfaces explicitly designed to be paired with wearable electrochemical devices are also well within the scope of this Special Issue.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.
