Remote Sensing for Land Cover Mapping: Approaches for Supporting UN Sustainable Development Goals (SDGs)

Message from the Guest Editors

Satellite remote sensing imagery has been commercially available for the past five decades. The Earth Resources Technology Satellite, later known as Landsat, was first launched in 1972. Landsat 8 was launched in 2013. High spatial resolution satellite images were first introduced in early 2000. They are now widely available for most parts of the world. Moreover, remote sensing datasets with a wide range of specifications from other sources (i.e., airplanes and drones) are also becoming ubiquitous. The aim of this Special Issue is to represent the latest advances in remote sensing and artificial intelligence for land cover/use mapping with an emphasis on supporting UN Sustainable Development Goals (SDGs) toward enhanced local and regional sustainable land use. About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Department of Electrical and Information Engineering, Politecnico di Bari, Via Orabona 4, 70126 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
