

Special Issue

Indoor and Outdoor Localization and Navigation—a Multidisciplinary Approach

Message from the Guest Editors

The main aim of the present Special Issue is to invite researchers to present multidisciplinary solutions that take advantage of connecting and exploiting various methodologies and sensors, such as cameras, depth cameras, UWB anchors, RFIDs, the IoT, radars, lidars, smartphones, ultrasonic, beacons, and so on. This Special Issue of *Sensors* aims to collect both reviews and original research papers on advancing technology for localization and navigation. Potential topics include but are not limited to the following: AI Computer vision Robotics Machine Learning Dead-Reckoning IoT UWB Sensor Fusion WIFI Autonomous Driving Smart mobility EKF and UKF

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.
