

Special Issue

Advances in Remote Sensors for Earth Observation

Message from the Guest Editor

This is an invitation to contribute to a Special Issue aiming to provide a snapshot of new horizons in Earth observations introduced simultaneously by advances in new physical measurements and by the rapid miniaturization of established sensor systems. The efforts of the science and engineering community have paved the way for fundamentally new measurements, such as Doppler lidars and fluorescence radiometry, and for far-reaching miniaturization of complex instruments, including hyperspectral imagers. In addition, the feasibility of on-board data processing has been demonstrated even on nano-satellites. This leads to instrument design and information extraction based on increasingly focused and solid physics underpinning narrowly defined measurement concepts. About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro
Department of Electrical and Information Engineering, Politecnico di Bari, Via Orabona 4, 70126 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
