

## Special Issue

# Robotic Sensing for Biomedical Applications

### Message from the Guest Editors

In the last few decades, rapid technological advancements have led to the development of several robotic devices and automated systems for biomedical applications. In this context, sensing technology represents a key component for the successful navigation, localization, and activation of robotic devices in complex environments (e.g., the human body) for diagnostic applications and medical treatments. This Special Issue focuses on the development of robotics and automation technologies for biomedical applications, including instruments for monitoring, inspecting, and screening pathologies. Additionally, information technologies supporting sensing, analysis, and design tasks to enhance the performance of existing diagnostic systems and treatments are also of interest. ## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Department of Electrical and Information Engineering, Politecnico di Bari, Via Orabona 4, 70126 Bari, Italy

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
