

## Topical Collection

# Vision Sensors and Systems in Structural Health Monitoring

### Message from the Collection Editors

In recent years, the growth in structural health monitoring (SHM) and non-destructive testing and evaluation (NDTE) technology has been acknowledged. Most solutions available in the market today make use of contact-based sensors. However, this approach is limited. Available methods produce results at only a discrete number of points, are expensive, and interfere with the structural response of tested objects. To address all the limitations of current technology, the research community has been actively exploring non-contact measurement methods. Recent advances in camera technology, optical sensors, and image-processing algorithms have made computer vision a viable option. Vision systems allow remote inspection while not interfering with the structure's operations and permit high density of measurements points.

This Topical Collection explores theoretical and experimental advances in optical sensors, computer vision, image processing and analysis for SHM and NDTE. We invite researchers to contribute original research, case studies, industrial applications and review articles over the current state-of-the-art.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
