Sensor-Based Technology for Monitoring Movement in Special Populations

Message from the Guest Editor

This Special Issue is addressed to all kinds of sensors or sensing technologies that are currently being used for monitoring movement in these special populations. Data collected from various types of sensing devices including wearable, embedded or optical sensors, video-based sensing, virtual reality (VR)/augmented reality (AR), and human–computer interface are also welcome. Both review articles and original research papers relating to the topic are solicited.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.
