

## 3D Printing in Separation and Reaction Processes

Guest Editors:

**Dr. José Daniel Araújo**

Faculty of Engineering, University  
of Porto, Rua Dr. Roberto Frias  
s/n, 4200-465 Porto, Portugal

**Dr. Petr Stavarek**

1. Faculty of Materials Science  
and Technology, VŠB Technical  
University of Ostrava, 17,  
Listopadu, Ostrava, Czech  
Republic  
2. Institute of Chemical Process  
Fundamentals of the CAS, v. v. i.,  
Rozvojová 135, 165 02 Prague,  
Czech Republic

Deadline for manuscript  
submissions:

**closed (15 June 2022)**

### Message from the Guest Editors

The market of 3D printing has been experiencing impressive growth with application in areas. Three-dimensional printing has crucial benefits over conventional manufacturing processes.

Separation and reaction units are at the core of many industries. In this context, the combination of proper modeling approaches with the flexibility of 3D printing can have an important and disruptive role on how these units are designed.

This Special Issue on “3D Printing in Separation and Reaction Processes” aims to address the recent developments achieved by the application of 3D printing to separation and reaction units/systems. We welcome review articles and original research papers. Topics include but are not limited to:

- Membrane separation modules
- Adsorption processes
- Chromatography
- Crystallization
- Extraction processes
- Multiphase catalytic reactors
- 3D printing of structures for catalysis and adsorption
- Reactor intensification
- Flow hydrodynamics in process units
- Scale-up strategies
- Bubble removal
- Rheology in 3D printing
- Microstructured reactors

# Special Issue

- 3D printing and organs on chip

separa

- New emulsification devices
- Cell enrichment

an Open Access  
Journal by MDPI

## Message from the Editor-in-Chief

*Separations* offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [CAPlus / SciFinder](#), and [other databases](#).

**Rapid Publication:** manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
