Technology, Kunming 650093,  
China

Deadline for manuscript  
submissions:

**closed (30 June 2023)**

### **Message from the Guest Editor**

Mineral resources play a critical role in various material applications. Flotation is a practical technique to separate valuable minerals from gangue minerals based on differences in physical and chemical properties on mineral surfaces. Flotation reagents, such as collectors, activators, depressants, frothers, regulators, etc., are commonly employed in the recovery of valuable minerals. The gradual depletion of high-grade mineral resources has made complicated and refractory ores an alternative source to meet market demands. Thus, there is a crucial need for research on the theory and application of flotation to address the issues in the separation of valuable minerals from gangue minerals. This Special Issue will focus on recent advances in flotation theory, reagents, and techniques [...]

## Message from the Editor-in-Chief

*Separations* offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [CAPlus / SciFinder](#), and [other databases](#).

**Rapid Publication:** manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
