Special Issue

Engineering the Loop: Advancing Wastewater Treatment and Sludge Valorization Through Innovative Separation Materials

Message from the Guest Editors

Wastewater and sludge treatment technologies have advanced significantly as a result of the adoption of the circular economy framework. Waste-derived products like bio-based adsorbents, hydrogels, alginate, EPSs, and PHAs are now used as sustainable alternatives to traditional treatment agents. These materials effectively remove pollutants and stabilize sludge, leveraging high adsorption, biodegradability, and adjustable structures. These waste-derived products have enormous potential for secondary uses beyond their primary treatment roles. For example, EPSs and PHAs have the potential to be used in the production of biodegradable composites for packaging and in civil engineering sectors, while treated sludge enhanced with functional biopolymers can be used as soil amendments in agriculture. These materials can also help create reactive barriers and sophisticated filtration systems for industrial water treatment. In addition to improving the effectiveness of sludge and water treatment procedures, this all-encompassing strategy aids in sustainable resource recovery, lessens environmental impacts, and fosters the growth of a truly circular economy across a number of industries.

About the Journal

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

Editor-in-Chief

Prof. Dr. Frank L. Dorman
Department of Chemistry, Dartmouth College, Hanover, NH 03755, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.3 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
