

## Special Issue

# Extraction and Analytical Methods in Food Technology

### Message from the Guest Editors

Extraction and analysis methods are used simultaneously to preserve the quality and safety of food. They are used to detect and quantify contaminants (such as heavy metals, pesticides, and mycotoxins), and to assess the nutritional content within foods. These methodological advances have increased the accuracy, sensitivity, and speed of food analysis, giving us greater confidence in the safety and quality of the food we eat. Extraction methods commonly used in food technology include solvent extraction, solid-phase extraction, and supercritical fluid extraction. Analytical methods used in food technology include chromatography, spectroscopy, and electrophoresis.

## About the Journal

### Message from the Editor-in-Chief

*Separations* offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q2 (Analytical Chemistry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
