# **Special Issue**

# Application of Chromatographic and Related Techniques in the Detection of Food Chemical Residues

## Message from the Guest Editors

Food safety is one of the main challenges when it comes to ensuring the health of consumers and the quality of products. There is a growing demand for simple and reliable analysis of contaminants in foods and supplements to achieve this. The new strategies of sample preparation are moving toward greener and eco-friendly techniques, which use less sorbent and solvent and smaller sample sizes. This Special Issue will highlight analytical separations based on chromatography and their hyphenation with chromatography, mass spectrometry and related techniques. Recent improvements in sample preparation techniques for different contaminants in foods and supplements based on analytical (micro)extraction and new extraction solvents such as natural deep eutectic solvents will also be covered. Some of the topics that will be discussed include:

- New extraction phases and technologies;
- Contaminants of emerging concern and current issues:
- Food control and analysis;
- New devices and techniques;
- New strategies in metabolomics;
- Green analytical chemistry and metrics;
- Chemometric tools.

## **About the Journal**

## Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, Separations, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

### Editor-in-Chief

Prof. Dr. Frank L. Dorman

Department of Chemistry, Dartmouth College, Hanover, NH 03755, USA

## **Author Benefits**

## **High Visibility:**

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

### **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.3 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).

## Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
