

Special Issue

Research on Novel Separation Media and Separation/Analysis Technologies

Message from the Guest Editors

With the rapid development of life science, environmental science, food safety, pharmacy, and synthetic chemistry, the efficient and rapid separation and analysis technology has attracted increasing attention. This Special Issue brings together a diverse collection of original research articles and reviews that explore the latest advances in separation and analytical methodologies. The articles cover the development of various separation media, separation technologies, and the analytical methods of a wide range of sample types, including environmental, biological, pharmaceutical, and food samples. The featured articles delve into various separation media and separation techniques, such as chromatographic stationary phase, solid-phase (micro)extraction, liquid-phase microextraction, dispersive liquid–liquid microextraction, and accelerated solvent extraction, among others. Furthermore, the application of these separation techniques in tandem with modern analytical instruments, including mass spectrometers and spectroscopy systems, has revolutionized the field of sample preparation and separation.

About the Journal

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

Editor-in-Chief

Prof. Dr. Frank L. Dorman
Department of Chemistry, Dartmouth College, Hanover, NH 03755,
USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.3 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
