

Special Issue

Chromatographic and Electrophoretic Methods in Current Biomedical Analysis

Message from the Guest Editor

Liquid and gas chromatography (LC and GC, respectively) and capillary electrophoresis (CE) are the most important and frequently used analytical separation techniques implemented in a wide range of different practical areas. It is due to their universality concerning analyzed compounds, ability to be hyphenated with various detection techniques, flexibility to create powerful modifications (e.g., isotachopheresis, ITP, capillary electrochromatography, CEC), and outstanding separation ability. This Special Issue is aimed at the presentation of recent advances in biomedical analysis, including all aspects of method development, validation, and practical implementation. From an application point of view, drug model studies (e.g., enantiomeric separations with new chiral systems), clinical drug monitoring (e.g., metabolic and pharmacokinetic studies), quality drug control (e.g., identification and determination of drug impurities in pharmaceuticals), monitoring of potential biomarkers (targeted, untargeted, profiling), and other related examples (involving new (potential) drugs, toxins, substances of abuse, drug residues, etc.), are strongly encouraged to be submitted.

About the Journal

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Analytical) / CiteScore - Q2 (Analytical Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
