Special Issue

Advanced Separation Methods for Safety Assessment and Valorization of By-Products

Message from the Guest Editors

The valorization of agri-food by-products for human and animal consumption has gained significant interest, particularly in the feed, food, nutraceutical, and pharmaceutical industries. In this context, the development and optimization of analytical methods for the quality and safety assessment of plant and animal by-products, as well as the upcycled foods and ingredients derived from them, are critical to ensure consumer protection and regulatory compliance. This Special Issue aims to bring together the latest innovations in advanced separation methods and analytical techniques for safety assessment, the removal of undesirable physical and chemical substances, and the extraction and purification of highadded-value compounds with bioactive and functional properties from agro-industrial by-products. The main goal is to promote the sustainable and cost-effective upcycling of these raw materials into natural feed and food-grade ingredients. We invite researchers and professionals in the field to submit original research papers and review articles that contribute to food loss and waste valorization in an eco-sustainable manner. We look forward to receiving your submissions!

About the Journal

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, Separations, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

Editor-in-Chief

Prof. Dr. Frank L. Dorman

Department of Chemistry, Dartmouth College, Hanover, NH 03755, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.3 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
