

## Special Issue

# Separation, Extraction and Purification of Natural Products from Plants

### Message from the Guest Editor

Natural products include a large and diverse group of substances from various natural sources such as plants, bacteria, fungi, insects, arachnids, marine organisms, and higher-order animals. Natural products have a long history of use as drugs, drug precursors, and/or complementary health adjuvants. Most Chinese medicines and other traditional medicines are natural products. Natural products are usually prepared by a series of processes of extraction, precipitation, adsorption, and so on. The quality of natural products is usually affected by both material attributes and process parameters. To improve the batch-to-batch consistency, the control of material quality and process quality are both required. Many new methods on material quality analysis, process monitoring, and process optimization have been developed in recent years. The concept of quality by design is also widely accepted and implemented. This Special Issue, "Preparation and Quality control of Natural Products," offers the opportunity to publish high-quality multidisciplinary research and reviews related to all aspects of preparation methods and quality control methods focused on natural products.

## About the Journal

### Message from the Editor-in-Chief

*Separations* offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.3 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).

#### Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
