

## Special Issue

# Membrane Preparation and Application for Separations and Water Treatment

### Message from the Guest Editors

Membrane technologies are used in large-scale water and wastewater treatment processes, attributed to their remarkable features of compactness, easy automation, and high removal of contaminants with different sizes. However, a limited separation performance, low productivity, and short membrane lifespan present technical challenges to membrane separation. To solve those issues, the development of membrane preparation techniques is more urgent than that of membrane materials, not only affecting physicochemical properties and the separation performance of the fabricated membranes, but also directly determining their potential for industrialized application. This Special Issue on “Membrane Preparation and Application for Separations and Water Treatment” seeks contributions assessing the state-of-the-art and future developments in the field of separation membrane preparation and applications for water and wastewater treatment. Topics include, but are not limited to, new manufacturing techniques and materials developments, and water/wastewater treatment applications, demonstration efforts, and industrial exploitation.

## About the Journal

### Message from the Editor-in-Chief

*Separations* offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.3 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).

#### Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
