

Special Issue

Separations and Analysis of Proteins in Biological Samples

Message from the Guest Editor

Analysis of proteins in biological samples is an increasingly evolving and desirable method for studying organisms, their functions, and development. It mainly includes the use of modern methods of mass spectrometry in conjunction with separation techniques. An integral part of this research is the use of appropriate methods for sample preparation that allow targeted analysis.

The presented Special Issue should include both well-arranged articles providing an overview of the current development of methods and procedures of analyses in real biological samples, as well as experimental works dealing with new procedures and approaches applied in specific analytical problems. Papers on new techniques suitable for protein analysis are also welcome. Of course, the scope of this volume is not limited to the analysis of “pure” proteins but also includes their modifications.

The aim of this Special Issue should be to provide a general overview of modern methods used to analyze proteins in biological samples, but also to outline the current trends in these methods, to acquaint the scientific community with modern procedures and approaches to real proteomic analysis.

About the Journal

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

Editor-in-Chief

Prof. Dr. Frank L. Dorman

USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.3 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
