

Special Issue

Development of Analytical Methods Based on Microextraction Techniques

Message from the Guest Editors

Microextraction techniques provide numerous advantages to sample preparation steps compared to traditional techniques, such as the reduction of the consumption of organic solvents from milliliters to just a few microliters, the removal of additional cleaning steps (which represent additional time and potential loss of analyte), and the improvement of selectivity and enrichment factors. For these reasons, researchers have in recent decades focused on designing new and innovative microextraction approaches. The present Special Issue covers the recent advances on the development and application of microextraction techniques, as well as the use of novel (nano)materials and solvents, which offer great opportunities in the development of phases for more efficient and versatile approaches. We strongly hope that this Special Issue will provide an analytical perspective of the current research involved in the field of microextraction. Original articles and reviews articles by experts are particularly welcomed.

About the Journal

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

Editor-in-Chief

Prof. Dr. Frank L. Dorman

Department of Chemistry, Dartmouth College, Hanover, NH 03755,
USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
