

Special Issue

Chromatographic Techniques in Forensic Chemistry and Toxicology

Message from the Guest Editor

Chromatographic techniques are integral to systematic analysis, allowing for the proper investigation of forensic cases of a chemical and/or toxicological interest. The variety and complexity of seized samples and biological specimens have necessitated the development of sensitive analytical methods, mainly based on chromatographic techniques, that are capable of the qualitative and quantitative determination of a variety of prescribed drugs, drugs of abuse, volatiles, and other chemicals. Chromatographic techniques, such as HPLC coupled to UV and/or DAD, have been extremely useful for preliminary screening. GC or LC coupled to mass spectrometry is critical for confirmation of the presence of substances in samples. GC-FID has a unique role in the identification of volatile substances in biological fluids. In this sense, the role of chromatographic techniques during the preliminary screening process is often essential and a mandatory part.

The aim of this Special Issue is to present the latest developments in the application of chromatographic techniques as applied in forensic chemistry and toxicology with respect to extraction, chromatographic, and detection trends.

About the Journal

Message from the Editor-in-Chief

Separations offers the scientific community a high-quality, open-access journal option with rapid time-to-publication without any sacrifice of a rigorous peer-review process. We invite contributions ranging from fundamental characterization and instrumentation development through application of techniques to shed light on a broad spectrum of separation science needs. Since inception, *Separations*, has become unique in its combination of rapid publication and thorough scientific content. We invite you to consider us for your next contribution.

Editor-in-Chief

Prof. Dr. Frank L. Dorman
Department of Chemistry, Dartmouth College, Hanover, NH 03755,
USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q2 (Analytical Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
